

# QFIELD REFERENCE

This section provides instructions for using QField including downloading projects, capturing points while in the field, editing these points and uploading these points back to your QGIS. Make sure GPS 'location' settings are switched on in your mobile device settings.

## 1. Open QGIS project

## 2. Setup basemap, open layer and begin digitising

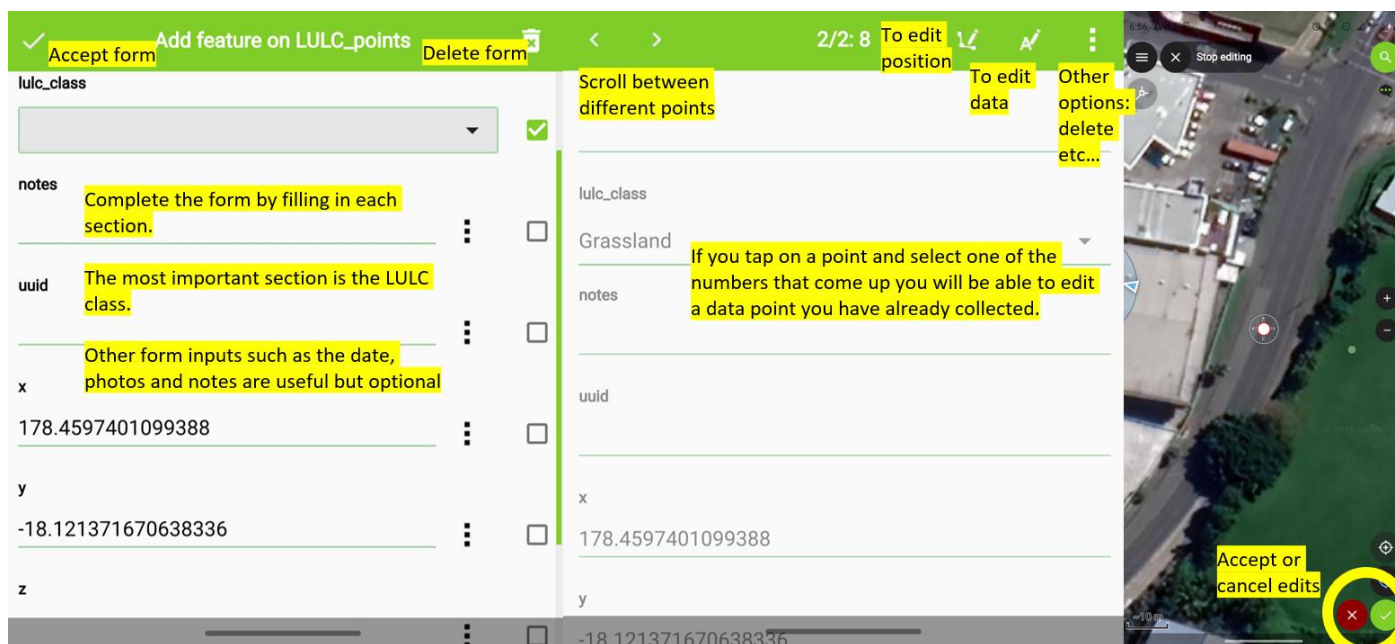

### 3. Setup basemap, open layer, orient yourself and begin digitising

### 4. Filling in forms, submitting forms, editing or deleting data you have already collected.

## 3B.2. Transferring from QGIS to Mobile Device:

In order to upload your project to your mobile device, you will need to design a form using QGIS and the QField Sync plugin. Learn more about the QField Sync Plugin here: <https://docs.qfield.org/get-started/tutorials/get-started-qfs/>.

## 3B.3. Transferring from Mobile Device back to QGIS

In order to upload your project from your mobile device back to QGIS, you will need to use a phone cable into your computer or sync your project using a QField Cloud account. Learn more about how to setup a QField Cloud account here: <https://qfield.cloud/>.
